DETAILED ACTION

Claims 1-22 are pending.

Specification

The incorporation of essential material in the specification by reference to a foreign application or patent, or to a publication is improper (see pages 6 and 18 of the specification). Applicant is required to amend the disclosure to include the material incorporated by reference. The amendment must be accompanied by an affidavit or declaration executed by the applicant, or a practitioner representing the applicant, stating that the amendatory material consists of the same material incorporated by reference in the referencing application. See *In re Hawkins*, 486 F.2d 569, 179 USPQ 157 (CCPA 1973); *In re Hawkins*, 486 F.2d 579, 179 USPQ 163 (CCPA 1973); and *In re Hawkins*, 486 F.2d 577, 179 USPQ 167 (CCPA 1973).

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 1-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 3. Claims 1, 4-7, 9, 10, 12, 15-18, 20, and 21 are rejected due to the phrase "derivative thereof". While a number of derivatives of hydroquinone are listed on pages 5-8 of the specification, it is unclear if this list is comprehensive, or whether the phrase

Application/Control Number: 09/784,179 Page 3

Art Unit: 1619

includes other compounds that are not disclosed or exemplified. The specification does not provide a standard for ascertaining whether a particular compound is a hydroquinone derivative or not. Therefore, the metes and bounds of the phrase are unclear.

4. Any remaining claims are rejected for depending from an indefinite base claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 1-3, 8, 12-14, and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Philippe et al (WO 99/10318). Philippe discloses aminophenol derivatives and methods for depigmenting skin or hair (see abstract). A preferred derivative is N-cholesteryloxycarbonyl-4-aminophenol (see page 4, lines 35-40). Compositions comprising 0.001-10% by weight of the derivative are disclosed (see page 6, lines 1-3). Lipid vesicles are also disclosed (see page 6, lines 5-11). Philippe discloses that the aminophenol derivatives can also be combined with other depigmenting agents, including hydroquinone (see page 7, lines 12-21).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 8. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 9. Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Philippe et al (WO 99/10318).
- 10. Philippe teaches the use of aminophenol derivatives in cosmetics for depigmenting and/or bleaching skin or hair (see abstract). A preferred derivative is N-cholesteryloxycarbonyl-4-aminophenol (see page 4, lines 35-40; and example 3, page 8, lines 17-29). Compositions comprising 0.001-10% by weight of the derivative are taught (see page 6, lines 1-3). Lipid vesicles are also taught (see page 6, lines 5-11 and 27-29). The reference teaches that the aminophenol derivatives, when combined with other depigmenting agents such as hydroquinone, allow the hydroquinone to be used at doses that are less toxic to the skin and that when the components are incompatible

Application/Control Number: 09/784,179

Art Unit: 1619

they can be incorporated in vesicles (see page 7, lines 11-21). The reference lacks the weight percentages of the hydroquinone.

- 11. While the reference is silent regarding % by weight of hydroquinone, differences in concentration will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such concentration is critical. Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation. *In re Aller*, 220 F.2d 454, 105 USPQ 233, 235 (CCPA 1955).
- 12. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the compositions taught by Philippe by the routine optimization of the concentration of hydroquinone in order to benefit from compositions that are less toxic to the skin as taught by Philippe.

Conclusion

13. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tuloup et al (US Pat. 6,159,482) discloses compositions comprising 4-aminophenol derivatives for depigmenting skin or hair. The compositions can include hydroquinone. Chevalier et al (EP 0 962 224, see US Pat. 6,203,781 for English language equivalent) discloses the use of hydroquinone or N-cholesteryloxycarbonyl-4-aminophenol in combination with optical brighteners for depigmenting the skin.
